

The Concern of Obesity

It wasn't that long ago that I was over 30 pounds overweight. I was a new mom, and loved my son, but early complications during the pregnancy left me less mobile than I had been, and the scale crept up as the months passed. I stopped doing yoga, and didn't take care of my diet. I stayed vegetarian, but wasn't making very healthy choices, carrot sticks began being replaced with spoonfuls of Nutella. Most people know the typical story. As my son started walking and talking, and I realized that my marriage was crumbling, no doubt my diet and exercise suffered. I eventually split from my husband and moved back to the states. It was a difficult road, and it took me some time, but I found my path to get "back to myself."

I made a really small change to start. You've probably read the articles that outline the basic small changes to make to jumpstart a healthier lifestyle. Park your car in the parking spot farthest from the store, take stairs over elevators, stop eating after 8 pm. These were little changes for me to make. The bigger commitment came when I bought and started wearing a fitbit step tracker. It was so motivational to me, seeing the steps increase each day. At 9 pm, when I saw that I was at 7-8,000 steps and seeing that I was so close to the recommended 10,000 steps, I found myself walking around my house after my son went to sleep, and then going up and down the basement stairs to make it to 10 floors a day.

The greater changes happened when I started tracking my food intake. There is a sense of accountability when you admit what you are eating, on an online app or in a notebook. Amazingly, I started to eat healthier when I wrote it down. I no longer craved the chocolatey goodness of nut spread, but instead longed for an apple or another fresh, crunchy, and all-natural food choice. Again, the motivation came naturally, which made the choices so obviously easy.

Each day I grew stronger, and each day the weight just slipped away. And years later, the weight is still off.

I'm concerned with the growing rate of obesity in our country. It is disturbing to know that according to The State of Obesity (<https://stateofobesity.org/>), the 2015 national average put high schoolers at a 13.3% obesity rate. Nearly 38% of adults in the United States are obese. This is terrible news. Certain states have higher percentages than others. For example, Colorado has the lowest adult percentages, at 22.3% obese, whereas West Virginia and Mississippi are at a staggering 37%! Let's work to bring these numbers down!

With our hectic lifestyles it can be hard to find time to walk even 3,000 steps. But we have to do all we can to make some movement in our lives. Make walking, or biking, or some light weight lifting a priority in your life. Moving for 10 minutes a day will likely inspire you to add another 5 and then 10 minutes as the weeks progress.

Evolve your health in little steps and see big progress over time. You can do it. Be your own advocate for a healthy lifestyle. Incorporate a healthy habit of movement into your life. I promise you, you'll be very happy with the results!

Machine-Free Exercises to Improve Back Muscles

Back pain affects a lot of us. Many exercise programs focus on thin legs and a solid core, but we could all use a stronger back. We're less likely to sustain injuries while performing sports, but also while performing daily chores such as lifting grocery bags or worse, sitting for hours at a time. Good spine

posture is important, and incorporating back strengthening exercises into your routine is a great way to help your body be stronger overall. Read on for some machine-free exercises that are easy to learn, and will get you pumped for strength!

Bent-over Reverse Fly

You can benefit from doing this exercise without weights, but if you can handle it, I recommend holding on to at least 5 pound dumbbells for this. With weights in hands (or not), stand with your feet shoulder distance apart and knees bent slightly. Keep your back straight as you bend slightly forward. Your chest should be over your knees. As you exhale, lift both arms up to the side, elbows slightly bent, as you squeeze your shoulder blades together. Hold for just a moment, then slowly, with control, lower the weights/your hands back down to in front of your knees. Bring your arms back up, for a total of 5 reps, then set the weights back down on the ground.

Turning up the intensity of this exercise is easy: either increase the weights you use, increase the number of reps you do before you break, or you can bend further forward in your initial stance. Be sure to keep your head level with your spine. If it feels painful, decrease the weight you are pulling up.

Superman

Lie belly down with your arms extended above your head, palms down, and your toes tips resting on the floor. Start by resting your forehead on the ground and take a deep breath in. As you exhale, while keeping your core engaged and your arm and leg muscles strong, lift your arms and legs up off the ground 4-6 inches. Hold this pose tightly for a few seconds, and then inhale slowly as you lower your arms and legs back down.

You can make this more difficult by bringing your limbs higher up, and holding for longer periods. Variations can make it a

fun exercise as well, such as lifting alternate hands and legs (right arm and left leg up at the same time). Even though one leg or arm is down, keep those muscles engaged. And be sure to keep your shoulders down and away from your ears. Your gaze can stay on the floor, don't lift your head up.

Bridge

The bridge can be done full, or as a half bridge, and both will help strengthen your lower back muscles. The main muscle used for the bridge is the gluteus maximus, which you might think is only good for making your bum look good, but really it is the foundation of your back, so keep it strong. For half-bridge, start by laying on the ground, knees bent, with your feet flat on the ground, about hip width apart. With your arms at your side, lift your hips up to the ceiling as you push on the floor with your feet. Keep a straight line from your chest to your knees as you breathe deeply for a few breaths in this pose. Lower your back slowly to the floor, take a few breaths in and repeat. Do this 15-20 times.

When you are strong enough, you can do full bridge. For this, start with your feet in the same place, but instead of keeping your arms at your sides, place your hands palm down next to your ears – your wrists facing away from your body, and your fingers just under your shoulders. Start by pushing up on your hips, and once they are up, use your arms to put the top half of your body up to meet your hips. Keep in this pose for as many breaths as you can – start with 5 and work up to 10. Come down slowly, ensuring that your head comes up to keep your spine long. Try to roll down the spine, one vertebrae at a time. Do the full bridge 3 times then when you are done, bring your knees into your chest and squeeze to release the tension from the pose.

Incorporating these poses into your home workout will strengthen your back muscles, which in turn makes your core even tighter. Just takes a few extra minutes in your daily

exercise routine. Add these exercises ... your back will thank you.

5 Minute Meditation

Most days it seems there is just never enough time. But finding 5 minutes daily to find inner peace can really be quite manageable.

If you make it intentional, setting aside 5 minutes a day is easy. Over time, you might challenge yourself to add 1 or 2 minutes more each day, slowly but surely, and in really no time you will be up to 20 or 30 minutes daily, which will provide you with so many benefits.

THE METHOD

Set aside time each day, preferably at the same time daily, to give yourself a relaxing moment. Your phone should be turned to mute, or better yet, placed in another room.

When you close your eyes, be sure to relax your mind and body. As you breathe in and out, envision any tension in your body being released. The energy might find its way out through your hands, your feet, or perhaps your head.

Watch the stress flow away as you focus on your breath. If you find your mind wandering, count from 1 to 10 and repeat as often and as slowly as possible. As thoughts enter your mind (distracting you), go back to 1 and keep counting up.

You can also focus on the feelings in your body such as a discomfort in your right knee, or realizing your back is slouching, or your chin is dropping. Keep your mind as present as possible, which will enable you to keep your mind still.

MAKE IT STRONGER

Once you accomplish 5 minutes a day for a week or 10 days you will see how easy it is to incorporate this simple benefit into your life. You will be sure to go back to your day feeling relaxed and refreshed and probably even proud of the steady accomplishment.

Be sure you sit in a comfortable position with loose clothing. Don't focus on if you are doing it right, just go back to the counting and breathing. Keep your mind in the present moment, wherever that might be.

Don't judge, just be. And relish these few moments that you give to yourself, which makes you a better human.

Namaste.

Love Your Life

Step into Transformation with this 8-week online course

By taking this course you will be able to:

- Rekindle an amazing relationship with yourself
- Let go of others' judgments and expectations
- Improve or repair your confidence
- Use the power of love to manifest your dream life

[Learn More – LOVE YOUR LIFE](#)

Burpee See Burpee Do

Your quick challenge is to do at least 50 burpees in 10 minutes. Take as many as 30 seconds rest per 1 minute round, which makes this challenge totally doable. Record in a journal each day how many burpees you can pull off and challenge yourself to do 1 or 2 more per day than the day before, and watch numbers quickly add up! If you are getting started, aim for 25 in 10 minutes and work up to 60, 70, even 90 burpees in a 10 minute stretch.

Doing burpees, or any exercise, consistently, you will find that your core will get stronger and if you want a further challenge you can add an additional squat round while holding arms at shoulder level for 50 squats, keep a wide stance and be sure to squeeze your glutes while standing. Always remember that your knees should never go past your toes during the squat. If you can't squat low without letting your knees project past the toes, then don't go so far down. Stay strong and build the muscles, and always squeeze the glutes at the top of each rep.

If you can spend only 15 minutes every other day doing these two exercises, you will find a long term change in both your body and your mind. Give those minutes to yourself as often as you can!
