

10 Things About Meditation You Need To Know Today

If you're thinking about getting started with meditation, there are some things that you need to know before jumping into it. Although meditation can certainly change your life for the better, it will only do so if you go into it fully prepared and with as much knowledge about meditation as possible. So, here are 10 things about meditation you need to know today.

1. There Are Different Types Of Meditation

There are many types of meditation, and every one of them is a little different. There are three primary types of meditation: open monitoring, focused attention, and automatic self-transcending. Within these, there are many other types of meditation that you can do, including heart rhythm meditation, guided visualization, and Qi Gong.

Each type of meditation is different and has various purposes and benefits. That's why it's important to take some time to determine exactly what you want to get out of meditation before you jump into it. You need to make sure that the type of meditation you choose fits your lifestyle and beliefs, and is something that will benefit you. There are some types of meditation that target specific problems such as anxiety, heart disease, or stress.

2. You Don't Have To Stick With One Type Of Meditation

You're by no means stuck with the first type of meditation that you choose. In fact, even if you've taken the time to

decide which one is right for you, it still may not end up working for you. The good news is that you can keep looking for another type of meditation to try until you do find something that works for you. You can also learn several types of meditation to gain the different benefits and use them for different situations.

We recommend taking time to learn one type well before moving onto another type of meditation. Because each type requires time to learn and practice, it's better to keep your focus on one type until you've mastered it before you decide to learn another one. However, once you have mastered several types, you'll be ready to use them when you need them.

3. It Doesn't Require A Certain Posture Or Position

When most people think of meditation, the first thing that comes to mind is a cross-legged guru with their hands resting on their thighs, fingers and thumbs forming circles while they hum. However, there really aren't any specific rules about how to meditate, and you certainly don't have to sit rigidly the whole time.

Actually, meditation requires you to be as comfortable as possible so you can keep focused on what's going on in your mind instead of your body. Sitting upright is generally the best position so you don't fall asleep while meditating, but there are some types of meditation that require you to be laying down, like body scan meditations and meditation for sleep.

4. It Won't Make Your Mind Go Blank

Something that many people incorrectly believe about

meditation is that it involves emptying your mind of all your thoughts and reach a state where you think of absolutely nothing for a period of time, and it's that blank slate that allows you to accomplish a greater level of enlightenment and self-awareness. However, this is simply not true, nor is it possible.

The mind naturally jumps from thought to thought, and trying to stop it from doing that will only leave you frustrated and very much not relaxed. What meditation actually does is gives you tools to keep your focus on only your meditation. Being aware of the thoughts that come up during meditation is an important part of it and is what will help you come to a deeper understanding of your own mind.

5. You can learn from a variety of sources

Some people believe that there's only one way to learn how to meditate, but there are actually several different ways. This is great news because everybody has a different learning style, so not everybody is going to be able to learn meditation the same way, just like learning anything. Fortunately, for as many learning styles as there are, there are tools and techniques to learn how to meditate.

You may find that reading a book is the best way to learn meditation. Others may instead listen to that same book on audio to learn. You can also get help from someone who has already mastered the type of meditation you want to learn. This can be the best way because they can help guide you and work through any specific problems that you have. What's important is that you find what works best for you.

6. You Might Fall Asleep During Meditation.

Even if you're not doing meditation specifically to fall asleep, you may find yourself falling asleep while meditating because it puts you into such a relaxed state, especially if you're doing it at the end of a long day at work. The good news is that this is totally normal and if you do, don't worry too much about it. If it does seem to be turning into a problem, then you can try a few techniques to keep yourself alert during meditation.

7. Meditation Physically Changes Your Brain

Although meditators have known that there are profound changes that happen in your mind when you meditate, only recently have researchers taken the time to study the physical changes that take place in your brain because of meditation. Some studies that have been done looked at the differences between meditators and non-meditators, while others looked at the changes that occurred in a group of people who started meditating.

One of the changes seen in the brain of those who meditate regularly is that there's more gray matter which means more brain cells. Another change involved the amygdala which is where the "fight or flight" reflex is triggered. In those that meditate regularly, this area was physically smaller which means they're more likely to handle stressful situations without reacting with fear.

Another interesting thing to note when it comes to physical changes that happen when you meditate are the brain scans done of people who have been meditating for many, many years. Their scans when they were not meditating looked like an inexperienced meditating while in a state of meditation, meaning that the changes that occur during meditation eventually become permanent.

8. There Are Many Health Benefits To Meditating

The health benefits that occur in the brain from meditating are only the beginning of the many things that meditation can do for your body. Meditation has also shown that it can increase blood circulation which helps lower your blood pressure and your risk of developing heart disease, which is the leading cause of death for people in the United States.

One of the reasons that meditation has such an impact on your health is that as you become more aware of your inner self, you become more protective of it and begin to make healthier choices for your body. Many people have successfully used meditation to quit smoking or get out of other addictions because meditation allows them to deal with the underlying reasons for their addition.

9. It Doesn't Have To Take A Lot Of Time Out Of Your Day

This may be one of the most common misconceptions with meditation is that it takes up a significant part of the day. This belief has led many people to not even bother to meditate since they don't feel like they'll have the time to do it. Although there are certainly some types of meditation that expect people to devote an hour in the morning and an hour at night, there are many more that require significantly shorter amounts of time, as little as 5 minutes, that are easy to fit into your day.

For people that truly understand how important meditating is, they will make it a priority and make sure that they devote the time they need to meditate every day. As you start meditating regularly and see the benefits of it, then you, too, will be willing to get up a little earlier or put your

phone down for a few minutes to meditate.

10. It Takes Time To Master

Like learning any new skill, meditation takes time to master. You won't get it right the first few times, and that's ok. Just like you don't be able to run a 6-minute mile the first time you step onto a running track, you need to practice to master meditation. It will also take time for you to begin to see the benefits of meditation, so don't give up if you don't immediately start sleeping better at night or feeling less stressed throughout the day.

This is why self-evaluation is such an important part of meditation. You need to take a step back every once and a while to really evaluate how you are so you can see that the meditation really is working. One way to do this is by keeping a journal where you can note your thoughts and feelings. Over time, you'll see how meditation is changing you and the way you see the world.

The Health Advantages of and Medical Conditions Helped by Meditation

You may have heard about the health benefits of yoga in improving mental and physical health and improving flexibility, and you might assume that meditation is the same thing. Although meditation can certainly be incorporated into

yoga, on its own, it is an entirely different practice.

How Meditation Works

Meditation involves *stopping your mind* while maintaining a state of awareness. It is much more than sitting and concentrating in a quiet area for a designated amount of time; it involves clearing your mind of thoughts, achieving a deep inward peace, and maintaining alertness in the process.

People often use certain postures, breathing techniques, and even chants to help facilitate the process, but these are not required, and they are not the act of meditation itself, just support tools.

As a beginner, you might consider taking a meditation class (or a yoga class that heavily emphasizes meditation) or invest in a video that introduces you to the concept of meditation and teaches you various techniques for facilitating the process. It does not come as easily for some as it does for others. Achieving a profound, deep sense of self, a “thoughtless alertness,” requires some guidance at first.

Specific Ways That Meditation Improves Health

Not only is meditation one of the very best ways to reduce stress, which is linked to a whole host of health issues and according to the Benson-Henry Institute, 60 to 90% of doctor visits are for conditions that are caused by stress, but Harvard University researchers conducted a study that connects deep relaxation to genetic changes in the body.

They found that “disease fighting genes” are more active in people who regularly practice meditation, compared with people in the control group.

These genes protect the body against a number of health issues, including:

- Heart Disease

- Asthma
- Infertility
- Arthritis
- Various skin conditions
- Irritable Bowel Syndrome
- Meditation even helps to boost immunity, and studies show that cancer patients have recovered more effectively due to meditation and are less at risk for developing another tumor.
- The benefits of stress reduction cannot be overstated.

Meditation makes the body less responsive to stress hormones, which lowers blood pressure, improves blood circulation, improves digestion and immunity, and establishes emotional and neurological “balance.”

How does this work exactly?

It largely comes down to hormones. Stress hormones such as cortisol and adrenalin increase blood pressure and heart rate, while “feel good” chemicals such as serotonin, which are released in a state of relaxation, work to repair cells.

More Health Boosting Benefits Of Meditation

- According to the Benson-Henry Institute, chronic pain patients reduce their physician visits by 36% when they practice regular meditation.
- Cardiovascular Quality and Outcomes, a journal of the American Heart Association, reported in their 2012 issue that a 5 year study on patients who had coronary heart disease found a 48% reduction in deaths, heart attacks, and strokes in those subjects who regularly practiced Transcendental Meditation versus those who did not.
- An analysis of a controlled trial, published in the Journal of Alternative and Complementary Medicine on October 2013 reported significantly greater effect of Transcendental Meditation in reducing anxiety over

conventional medical treatments and other forms of meditation and relaxation practices.

- According to Behavioral Medicine, Volume 16, a 50% reduction in visits to HMO doctors was found when a relaxation-response based practice, like meditation is used.

How To Incorporate Meditation Into Your Life

Here are ideas for incorporating meditation into your own life. Beginners could focus on numbers 1 and 2, and over time experiment with the other ideas.

1. **Participate In A Group Class.** You may be able to find a class in your community specifically dedicated to meditation, but due to popular culture, it may be easier to find a yoga class that heavily focuses on meditation, such as Kundalini Yoga or Ananda Yoga. Many people prefer taking these classes long-term as opposed to meditating by themselves because the group setting helps them to better focus or because they enjoy the sense of community.
2. **Use A Video or Audio To Guide Your Meditation.** Some meditation videos can be found for free online, such as through YouTube, or you can order a professional DVD or online subscription. If you prefer a mix of yoga and meditation, the best types of yoga to focus on include Kundalini, Ananda, Jivamukti, and Integral. Be sure to check out the free guided meditation file – available at the right of this page.
3. **Devote 20+ Minutes In The Morning Or Evening.** Research shows that just 20 minutes of consistent meditation sessions can have tremendous health benefits. Make time before your day starts or before you go to bed to meditate. Some people find that their minds are clearer at these times.
4. **Use Free Time To Meditate In Nature.** Many people find that sitting in nature – under a tree, on top of a

mountain, or in a quiet place in the sunshine – helps them to facilitate the meditation process. It's also a great way to get outside for Vitamin D.

5. **Meditate While At Work.** This is certainly the most difficult way to meditate because distractions at work can interrupt the process, but many people have been able to achieve a state of meditation *while* performing job duties. Talk about being dedicated to the cause!

Everyone is different. Experiment with different ways of meditating too see what you like and what comes easiest for you. Also try experimenting at different times of the day and for different periods of time, but aim for at least 20 minutes to reap the most benefit. The health effects on your body are well worth the effort!

Science Shows Meditation Slows Aging in the Brain

As the life expectancy continues to rise as it has for the last century, the percentage of the population that we are seeing with problems that we associate with an aging brain such as dementia or Alzheimer's continues to grow. By 2050, the percentage of the population that is age 60 and older is expected to triple, and, as a result, there is an expectation that dementia and other neurodegenerative diseases will also increase (World Health Organization).

Finding the path to slowing the cognitive effects of aging on the brain will be critical to the sustainment and quality of life for our aging population.

Science and Meditation

Science shows that meditation can decrease the rate at which our brain is aging. Age triggers a natural aging process of our mind. The cortex of our brain coats the surface of the cerebrum and cerebellum. Think of the cortex is commonly referred to as “gray matter” and it has the responsibility of processing information. The gray matter in our brain shrinks over time and leads to memory loss, verbal changes, and a decrease in the ability to process some forms of information.

Recent research shows that there is a correlation between age and brain gray matter in those who consistently practice meditation long-term. In fact, meditation can help us to preserve cognition, maintain the health of our brain tissue while also reducing the risk for conditions like dementia or Alzheimers.

Meditation and the Aging Brain

Meditation is useful in helping you to manage depression, stress, anxiety or pain. Studies show that mindful meditation is particularly helpful in supporting brain health through telomere elongation, hemodynamics, and cerebral blood flow.

In one study, 33 individuals who regularly practice meditation were asked to participate in a study looking to examine the effects of regular meditation habits on the brain. The study demonstrated that individuals who regularly engaged in the continued practice of mindful meditation experienced multiple benefits including increased sensory perception and sensitivity, and emotional awareness (Laneri, Schuster, Dietsche, Jansen, Ott, and Sommer, [Effects of Long-Term Mindfulness Meditation on Brain's White Matter Microstructure and its Aging](#)).

Another study analyzed the link between age and cortical thickness. That study demonstrates that meditators have a

thicker cortical layer than those who do not indulge in meditation, and was even similar to that of a 20-to-30-year-old (by Lazar et al. Meditation experience is associated with increased cortical thickness).

A third study evaluated the link between age and total gray matter volume as well as local gray matter volume. Those individuals who did not participate in meditation experienced a loss of gray matter over a period, while those who did engage in meditation had a gain of total gray matter (by Pagnoni, Age effects on gray matter volume and attentional performance in Zen meditation. Neurobiol. Aging).

This research demonstrates that meditation ignites a biological response in brain aging and neurodegeneration. It may slow, stall, or even reverse age-related brain degeneration. (by Luders et al., Forever younger: potential age-defying effects of long-term meditation on gray matter atrophy).

In Summary

We are all growing older each day. Although we cannot stop it from happening, we may be able to take action based on the scientific evidence to slow its impact on our brain. There is still a great deal of research to be done to examine further the positive effects that meditation may have on the health of minds. It is a cost-effective approach that has the opportunity for integration into our everyday health routines.

Meanwhile, you can take the first step to add routine meditation practice into your daily regimen to begin reaping the benefits of reducing age-related brain deficits.

If you find yourself struggling to find peace and

understanding in your daily life, it might be time to adapt a meditation practice. This short ebook covers aspects of meditation and self-discovery, introduces the “Rainbow Meditation Technique” and reviews the benefits of meditation.

What Are Morning Pages?

Journaling can be an amazing tool for self-development. But if you're a perfectionist, building a journaling habit can be difficult. Maybe you've tried journaling before, but you wanted to edit everything you wrote, so you gave up. Or maybe you're afraid to “ruin” a perfect blank notebook by filling it up with your thoughts. Sound familiar? If so, an approach called morning pages might be exactly what you need to start journaling without self-criticism or anxiety.

Morning Pages: The Basics

Morning Pages were first popularized through Julia Cameron's book *The Artist's Way*. The morning pages approach to journaling is very simple: just write three pages every morning. You can write anything you want – the idea is to capture your stream-of-consciousness inner monologue shortly upon waking. If you don't know what to write, then you can write about having nothing to say. There are no right or wrong topics. Morning pages are about getting your self-critical mind out of the way and *just writing*.

Morning pages are for your eyes alone. They don't have to be well-written. Spelling mistakes, grammar errors, and awkward

turns of phrase are all fine. When you do morning pages, you give yourself permission to write messily and imperfectly. It's also okay if your pages are repetitive and boring sometimes. You'll probably come up with more to say than you think you will, but there's no need to put pressure on yourself to come up with brilliant insights every day.

The Benefits of Morning Pages

Writing morning pages might seem like a tedious chore at first, especially if you're not used to writing in a journal regularly. But this simple habit has a lot of benefits packed into it.

First and foremost, morning pages put you in touch with your inner self. As we get older, many of us start tuning out our inner voice, and this can make it harder to live in an authentic way. When you start writing daily morning pages, you might discover some emotions, attitudes, and desires that you didn't know you were holding onto.

Writing morning pages also helps you clear your mind. If you keep your innermost self pent up all the time, it's easy to get overwhelmed by mental "junk." Writing every day helps you clean out the junk and focus on what's really important to you. This, in turn, can lead to better decision-making.

Finally, writing morning pages helps you move towards your goals. When you start the day by reflecting on your deepest dreams and wishes, you'll be less likely to procrastinate. You'll also be more likely to push yourself out of your comfort zone.

How to Make Morning Pages Work for You

Want to try writing morning pages for yourself? Here's how you

can build the habit successfully – and make it stick.

Try to write every day, around the same time. This gets you into a good habit of writing morning pages.

Always write with pen and paper, and never your computer. Getting in the habit of real handwriting will help you go deeper into yours thoughts.

Set a timer or choose the number of pages you want to write. It is okay to be flexible, based on your schedule.

Morning pages can be a great tool for gaining personal insights and improving your life. If you're intrigued by the idea of keeping a journal, why not give morning pages a try?

3 Easy Meditation Techniques

Look all around you, distractions abound everywhere.

Never mind what's going on in our heads.... let alone feelings, emotions, reactions. Or influences like competition, jealousy, and other negative thoughts. For these reasons alone, a meditation practice is practically essential.

Doing more, being more, achieving more, leads to a stress-filled lifestyle, with ever increasing stress levels which can result in heart problems, hypertension, among other ailments. Relaxation is exactly what the doctor should be ordering!

Relaxation can be achieved through meditation. What? Something so simple?

Yes! BUT! To be most effective, meditation is best performed on a regular basis and with an intentional mind.

Meditation practice has been around for thousands of years. Over time and through science, it has been shown to be an effective way to balance one's physical, emotional, and mental well being. Different forms of meditation have well-known physical, psychological, and spiritual health advantages. Among these advantages are enhanced focus, relaxation, and a more profound understanding of yourself and others.

If you aren't sure which type of meditation technique to try first, read these brief descriptions so you can find the method that most resonates with you, and begin with closing your eyes for just a few minutes.

Traditional Meditation

A study of the different types of meditation techniques has to start with traditional types of meditation. This type has been around for many decades. Traditional meditation is what a lot of people think about when they think of meditation. In this type, the meditator focuses on a mantra, an object, a scripture, image, or a bodily function such as their breathing or heartbeat or movement. When the mind wanders, the meditator brings their attention back to the focus of the meditation. This form of meditation requires a long time to master the deeper levels.

Binaural Meditation

The idea behind binaural meditation is that you listen to sounds being offered to your ears in stereo. In most cases, this technique is done with a set of headphones so that each ear can receive different signals. The two signals resolve to a frequency that induces a meditative state in the listener. This method can trigger a meditative state that usually only comes with many years of practice using traditional

meditation, even for a beginner. Binaural audio recordings can be found online.

Guided Visualization

A lot of people have heard of this form of meditation technique. With guided visualization, the focus is on the sound of a voice as it guides you through the meditation. When listening to a recorded guided visualization, this is usually paired with a soundtrack of some kind, often music, rain or waterfalls, ocean waves, or a combination. The soundtrack adds to the relaxation and the guide assists you get through to more profound levels easier than if you were meditating alone.

There are many other types of meditation techniques, and it is possible to combine different types of meditation, such as doing a guided visualization might while also concentrating on breathing. Don't overthink getting started with meditation... very basically, you can just close your eyes for a few minutes and try to think of nothing. If you mind wanders, just come back to nothing, again, and again.

Hinduism Goal of Moksha

One belief in Hinduism is that of reincarnation. The belief that one would die and be reborn as many times as need be until they obtain Moksha, the ultimate goal of all Hindus. This cycle of death and rebirth is known as the Samara. A person's quality of life typically determines what caste they would belong after rebirth. The higher the caste, the more the blessings.

The Samsara is said to have begun with religious movements at about the first millennium BCE. These movements include Hinduism, which believes that life is a complicated and repeated process of death and rebirth. They think it as bondage, and Moksha, the liberation.

Basically, people build up karmic connections through their actions. It could be good or bad. It is all dependent on how one has lived. If you live a life of devotion, free of troubles, you transcend into a higher caste, which as aforementioned, depicts more blessings, if you have lived a life causing chaos and increasing pain in the society, you transcend into a lower caste.

Also known as *vimoksha*, *vimukti*, and *mukti*, moksha is the total liberation from the cycle of death and rebirth. Its attainment is the highest goal in Hinduism. A state of freedom and liberation into a higher consciousness. It is derived from the Sanskrit *muc* which *translates* to being free, liberation. Moksha is the fourth goal of Hinduism. It is achieved only by overcoming the desires of the flesh, and all worldly sentiments, and living a life of benevolence. It is attainable both in the present lifetime and after death. To further buttress what it embodies, is to simply put that, it is a state where oneness with Brahman, the ultimate reality is attained. A state of peace and blessedness. This stage is known as the *paripurna-brahmanubhava*; the experience of oneness with Brahman.

Moksha is however thought somewhat differently by the varying school of thoughts in Hinduism. While it is thought of as liberation from the samsara, i.e., the cycle of death and rebirth, it is thought by others to be the end of the sufferings that are accompanied by the cycle of death and rebirth. Moksha is also referred to as kaivalya by some.

In some schools of thought in Hinduism, when Moksha has been attained by an individual during his/her lifetime, it is

referred to as *jivanmukti*, and the person who experiences this liberation, is called the *jivanmukta*, which translates to self-realized person. Moksha after death is however, referred to as *videhamukti*.

There are no definite and stipulated ways on how everyone can achieve Moksha. The Hindu books reveal that there are many different paths, all of which lead to liberation. Liberation which has been earlier stated to mean being in a state of oneness with Brahman. A state of absolute detachment from vanity and the outside world, a state of quietness and absolute control of the thoughts, which accordingly, is referred to as the ultimate form of bondage and liberation. This is because the mind suggests multiple thoughts to us, both positive and negative all day long. All of which create noise and some form of chaos in our mental state, disrupting our ability to concentrate and remain in oneness with the Brahman. When one is incapable of quieting their minds, and harmonizing with the Supreme Being, they remain in the state of bondage. However, when they are able to overcome the desires and temptations suggested by the mind, then they can achieve Moksha. The Hindu scriptures rightly states that if one cannot wield total control of their mind, they lack the weapons necessary to achieve Moksha.

In clearer terms, the Upanishads mention that the mind is basically of two kinds. The pure and impure. It is referred to as impure when it is brimming with desires of the flesh, and pure when it gains freedom from them.

Although the paths and processes to attaining Moksha are endless, there are three paths which could be termed as a summary of what the road to achieving Moksha would seem like. They are;

- The karma yoga, also known as the path of action.
- Bhakti yoga, which is the path of devotion.
- Jnana yoga, or the path of knowledge.

As countlessly stated, Moksha comes when one achieves oneness with God. However, there are different basic schools of thought regarding the nature of what oneness with Brahman indicates in Hinduism. One of these thought, and perhaps, most prominent is the *Advaita Vedanta*, otherwise known as non-dualism. It is the belief that a person's spirituality is tied to the ultimate reality, Brahman. Its doctrine is that total submission to Brahman is the way to achieve Moksha.
